

## Potyczki matematyczne styczeń

### Klasa 5

Wykonaj działania, wynik przedstaw w najprostszej postaci, a następnie odszukaj wynik na kratownicy i zamaluj według podanego wzoru.

 $5\frac{2}{9} - 2\frac{1}{2} =$	 $2\frac{1}{3} + \frac{2}{5} =$	 $1\frac{2}{5} + \frac{1}{8} =$
 $5\frac{1}{18} - x = 2\frac{2}{3} \quad x = ?$	 $\frac{1}{3} + \frac{2}{5} =$	 $4\frac{2}{5} + 2\frac{2}{3} =$
 $4\frac{2}{10} + 5\frac{9}{10} =$ Od sumy $4\frac{2}{10}$ i $5\frac{9}{10}$ odejmij różnicę liczb $7\frac{2}{10}$ i $3\frac{7}{10}$ .	 $\frac{5}{7} - \frac{1}{2} =$	 $5\frac{2}{3} - 1\frac{1}{4} =$
 $\frac{1}{3} + \frac{1}{2} + \frac{1}{8} =$	 $5\frac{2}{3} - 3\frac{7}{10} =$	
 $2\frac{1}{3} + 1\frac{3}{5} + 3\frac{5}{6} =$	 $7\frac{1}{4} - 1\frac{2}{5} =$	
 $x - 3\frac{7}{18} + 2\frac{13}{18} = 8\frac{17}{18}$ $x = ?$	 $10 - (5\frac{1}{6} - 1\frac{2}{3}) =$	 $3\frac{2}{3} + 1\frac{2}{5} =$

$7\frac{4}{15}$	$2\frac{14}{15}$	$4\frac{7}{20}$	$9\frac{11}{18}$
$\frac{11}{15}$	$2\frac{13}{18}$	$1\frac{21}{40}$	$\frac{23}{24}$
$\frac{3}{14}$	$6\frac{1}{2}$	$5\frac{17}{20}$	$2\frac{7}{18}$
$6\frac{7}{10}$	$5\frac{4}{15}$	$7\frac{23}{30}$	$1\frac{7}{10}$
